In a world with growing energy demand, Mozambique LNG is emerging as a global leader, developing the country’s first onshore LNG Park. With approximately 75 trillion cubic feet of recoverable natural gas discovered in Offshore Area 1, the Mozambique LNG Project represents an extraordinary opportunity to meet increasing world demand for a sustainable, reliable and cleaner source of energy.

**Mozambique LNG’s Strategic Advantage**

Mozambique LNG is working to advance a large-scale LNG park on the Afungi peninsula in Cabo Delgado province of northern Mozambique. The project features a number of competitive advantages that make it a strategic greenfield development:

**Location:** Direct shipping routes to global customers in the Atlantic and Asia Pacific markets, as well as growing opportunities in the Middle East and Indian sub-continent.

**Deliverability:** Highly productive subsea wells capable of flowing between 100 and 200 million cubic feet of natural gas per day.

**Timing:** Well positioned to deliver LNG early next decade to take advantage of a projected sweet spot in global supply and demand.

Anadarko, as Operator, and the participants in Mozambique LNG are committed to working collaboratively with the Mozambican government and communities to safely develop these natural gas resources in a manner that protects the environment, encourages additional foreign investment and contributes to the long-term economic stability of the region.

**A World-Class Subsea Development**

Mozambique LNG is one of the first subsea developments in Mozambique. Its close proximity to shore will enable these prolific subsea wells to be tied directly to shore via a subsea gathering system. This gathering system will be capable of handling 2 billion cubic feet per day of natural gas and will be a world-class for deepwater sub-sea development.

**Building a State-of-the-art Facility**

Mozambique LNG plans to build two initial LNG trains, each with capacity of 6 million tonnes per annum (MTPA). The LNG park will be scalable so that over time, it can be expanded up to 50 MTPA.
Access to Global Markets
The geographic location of the resources provides flexibility for Mozambique LNG to pursue customers in various markets around the globe, particularly in growing Asian markets.

Investing in the People of Mozambique
As the project builds momentum, the participants share a commitment to ensure the development of these resources carry tangible benefits for the people of Mozambique. Governing this process is the Operator’s Corporate Social Responsibility Framework, which focuses on Good Governance, Sustainable Development and Adding Value.

- The goal of Good Governance – is to ensure all business and project activities are undertaken based on the Operator’s values, principles and policies and in full adherence to Mozambique regulations, international guidelines and industry standards and practices.

- All activities and social projects are designed to elevate the standard of living within surrounding communities in a Sustainable and enduring manner. The project team seeks to empower communities to be independent, self-sufficient and skilled with the ability to drive and maintain their livelihoods long after the initial construction phase of the project is completed.

- And when it comes to Adding Value, the participants aim to pursue a range of approaches and activities from fueling economic growth, improving local infrastructure, focusing on national content for local employment, training procurement and business development, and making social investments that are aligned with the needs of the people and our business objectives.
